

Biometric Student Project Template

Project Title: _____

Overview: *Describe your overall concept.*

Group Members: _____

How do you plan to present your project? _____

1. Introduction / Overview

2. What is the new concept? Describe it in detail

3. What type of biometric device will be used?

4. Are there any environmental factors that would prohibit you from using this particular device (i.e. weather conditions, etc.)

5. Are there any physical factors that would keep an individual from being able to use this device? How could this be overcome?

6. Would implementation of this concept save money? How?

7. Are there ways the device could be fooled?-See the link below for an example:
<http://www.silicon.com/silicon/publicsector/0,3800010403,39160551-8,00.htm>

8. Who would benefit most from implementation of this product or service? Business, consumers, students, etc?

If time permits, please answer the following question:

Research various companies online that manufacture this type of product and decide on the exact device and model. Be prepared to back up your choice.

Presentations will be made in the form of a recorded podcast or video which we will assist you in creating. Answer each of the questions above being as creative as possible. Once you have completely answered all of the questions, come up with a script and act out a short 3-5 minute skit on using the new tool.
